## *Nihotunga traudlina* new species from the Island of Bali (Indonesia). (Crustacea, Amphipoda, Nihotungidae)

SANDRO RUFFO

(Museo Civico di Storia Naturale di Verona)

### ABSTRACT

*Nihotunga traudlina* n. sp. from Bali (Indonesia) is very similar to *N. ilaha* J. L. Barnard, 1972 and *N. noa* J. L. Barnard, 1972 and is distinguished mostly by mouthpart characters, coxal plates 1-3 and the third uropod. Females carry one single large ovipod oostegites are present only on the fifth segment.

**Key words:** Crustacea, Amphipoda, *Nihotunga* n. sp., Bali.

### RIASSUNTO

*Nihotunga traudlina* una nuova specie dell'Isola di Bali (Indonesia). (Crustacea, Amphipoda, Nihotungidae) - Viene descritta *Nihotunga traudlina* n. sp. dell'Isola di Bali. Questa specie è molto simile a *N. ilaha* J. L. Barnard, 1972 e a *N. noa* J. L. Barnard 1972 e se ne distingue soprattutto per alcuni caratteri riguardanti l'apparato boccale, le coxali 1-3 e l'uropode 3. Le femmine portano un solo grande uovo e gli oostegiti sono presenti soltanto sul segmento 5.

**Parole chiave:** Crostacei, Anfipodi, *Nihotunga*, nuova specie, Isola di Bali.

### INTRODUCTION

The family Nihotungidae was established by J. L. Barnard (1972a) for the species *Nihotunga ilaha*, collected in a few specimens from the SE coast of Australia. Barnard (1972b) found a second species, *Nihotunga noa*, very similar to the first one, from two stations on the east coast of New Zealand. Because of its unusual morphology it was deemed necessary to create a new family for the genus *Nihotunga*. There is a third, yet undescribed species from the island of Guam (central W-Pacific Ocean) (Barnard, Karaman, 1991).

The present material was collected by Traudl Krapp-Schickel on the coasts of Bali (Indonesia).

### SYSTEMATICS

*Nihotunga traudlina* n. sp.  
(Figs 1-3)

Type locality: Bali (Indonesia), near Samur

#### Material examined

1) Bali, sample 16, near Samur, near breakers, in *Posidonia*, 2 m, 22.9.1987, 3 ovigerous females, 1 male(?).

2) Bali, sample 27, Samur, *Posidonia* with epiphytes, *Sargassum*, 0.2-1 m, 26.9.1987, 1 male(?).

Holotype, ovigerous female 1.6 mm from Bali, Samur Indonesia (MVRCr.415 sl. 3767-3770 + 2 paratypes sl. 3771-3774 + 1 paratype in alcohol).

#### Diagnosis

A *Nihotunga* with articles 1-3 of mandibular palp subequal in length, flagellum of palp of maxilla 1 elongate, sharply pointed, maxilla 2 distal setae of the lobes basally articulated, coxa 3 as long as coxa 2, ischium of gnathopod 2 more than twice as long as wide, basis of pereopod 7 enlarged, with greatest width medially, article 2 of ramus of uropod 3 much shorter than article 1, telson triangular, elongate.

#### Derivatio nominis

I dedicate this species to Traudl Krapp-Schickel, pupil, friend, and almost a daughter for me. She also collected the present material.

#### Description

Ovigerous female, 1.6 mm, with only one large
