Download Microsoft Office 2016 32 bit Professional PLUS Activator Support Working 32 Bit And 64 Bit Environment.Q: Join a table with 2 table_alias and having the 3rd column and the last row of the result be null I have a table called tblParti and the name of this table is tblParti and the column of this table is PartiID. This table is filled with IDs of companies that are in the companies table. Next there is a table called tblLisePartis which is named tblLisePartis and its column is LiseID. This table is filled with IDs of companies that are in the tblParti table. The third table is called tblTitreLise which is named tblTitreLise and its column is TitreLiseID. This table is filled with the Title of the companies. My question is how can I join these three tables together so that the result returns the table names, PartiID, LiseID and TitreLiseID. My problem is that I want the last row in the result to be null. I can do this with the first two tables but not with the third. I want to do this in MS SQL Server 2016. A: You could do something like this: SELECT tbl.TableName, tbl.PartiID, tbl.LiseID, tbl.TitreLiseID FROM tblParti tbl LEFT JOIN tblLisePartis lp ON tbl.PartiID = lp.LiseID LEFT JOIN tblTitreLise tt ON tbl.PartiID = tt.PartiID AND tbl.LiseID = tt.LiseID WHERE lp.LiseID IS NOT NULL AND tt.TitreLiseID IS NOT NULL AND tt.TitreLiseID > lp.LiseID You could do the same thing by JOINing on the first LEFT JOIN and then making your WHERE clause the opposite of the first condition in the on clause. Q: How to get the list of employees who are working in two different projects in the same company I want 2d92ce491b
