

DU Meter is a tool for network managers and experts. It shows real-time graphs for the Internet speed and the LAN data traffic. The application also offers more advanced tools to monitor active network connections and generate on-screen reports. Network Monitor describes itself as a compact, handy network analyzer for home and work that displays the data traffic on your local area network (LAN). To do this, it uses the network interfaces provided by Windows Vista and Windows 7. You can then monitor both the transfer speed and the total data transfer of all programs and applications. Its main advantages include the ability to monitor both the speed of data transmission and the total data transfer, as well as the number of programs and applications that use the network bandwidth. It also provides you with an overview of the total data transfer, the speed of data transmission and the number of programs and applications. A very useful network monitoring tool. Interface: Network Monitor is a small, compact application that allows you to monitor the speed and data transfer of data on the LAN. Since it also uses the network interfaces available in Windows Vista and Windows 7, this program can also monitor the data transfer and the speed of data transmission of the following programs and applications: 1. Microsoft Outlook 2. Microsoft Word 3. Internet Explorer 4. Windows Mail 5. Media Player 6. WMP 7. Updater 8. RSS Reader 9. Safari 10. Hotmail 11. BBC iPlayer 12. Skype Network Monitor was tested on Windows XP. Version: 1.2 Network Monitor 1.0.0 The first release of Network Monitor. Network Monitor is a tool for network managers and experts. It shows real-time graphs for the Internet speed and the LAN data traffic. The application also offers more advanced tools to monitor active network connections and generate on-screen reports.
