How to Play Significant Digit Calculator Steps: Tap on the key to open the game Tap on the number you want to calculate the number of significant figures Tap on another number to show the difference Tap on Done to save your work Note: In the final step, you will find that it is possible to see all of the steps that you have performed. Tap the back button to remove all of your input. Significant Digit Calculator is free to play, but it does contain 'In-App Purchases'. You can view more information about the In-App Purchase here: [...] Significant Digit Calculator is an extremely simple but fun math game. The one thing I do find slightly confusing about the game is that you can still press the back button to remove all of your input when you have finished playing the game. [...] I was playing Significant Digit Calculator for a few days, and one of my friend told me that he had noticed that I had not saved a calculation. I just played again with no problem at all. The game was just fine. I just got 3 Significant Digit Calculator Recommendations From GooglePlay, I have to check out all of them. Thanks for your information. Hope all of these works fine for me too. For add more, here's my recommendation; go to Google Play and check out the Demo of the 5 top recommended. Let me know which one you want to try. Hey Jon, I just installed this app, and I am having a problem, my phone doesn't vibrate when I have a mistake when calculating the number of digits. Do you have a fix for this, please? [...]

What's New In Significant Digit Calculator?

Significant Digit Calculator is a simple program for calculating a number's significant digits. With the press of a button on your mouse, you can calculate the significant digits of a number as fast as you can say the number itself. Let's explain each digit displayed in the upper-right column of the window with code. 10. at the first digit of a hundred, displayed as two values (denoting 10.000) 9. at the second digit of a million, displayed as (5.000). 8. at the third and fourth digits of a million, displayed as (500.000). 7. at the fifth and sixth digits of a million, displayed as (4,000.000). 6. at the seventh and eighth digits of a million, displayed as (3,500.000). 5. at the ninth and tenth digits of a million, displayed as (3,000.000). 4. at the eleventh and twelfth digits of a million, displayed as (2,500.000). 3. at the thirteenth and fourteenth digits of a million, displayed as (2,000.000). 2. at the fifteenth and sixteenth digits of a million, displayed as (1,500.000). 1. at the seventeenth and eighteenth digits of a million, displayed as (1,000.000). 0. at the nineteenth and twentieth digits of a million, displayed as (0.000). These digits can be formatted, positioned, and even superscripted. A guide to formatting the significant digits of a number can be found at this page of the calculator. Note: This calculator is written in Java. For technical questions about this software, please send an email to my email address: "hirayuki [at] gmail.com". I have developed this software for educational purposes. Because a version that works on a specific OS will be available eventually, it may contain a limited number of features. If you have technical questions about Significant Digit Calculator, please contact me and I will try to answer them. The first few calculations If you push 'Calculate', then the first operation that happens is the calculation of the significant digits of the following number. In this window, the number to be calculated is on the top row and the display of the significant digits is in the upper-right cell. Because the number is so high,

System Requirements:
