Q: How can I access the content of a file from a class in a different file? I want to know how to access an SQL file from a class in a different file. The way I get it working is to use strings which are defined by me like this: `String filename = "C:\\test.sql";` But I have a problem with that. Since I have several files which all have the same naming convention as test.sql. Is there any way to define the file name in the class? A: Change the class to be `public class FileUtils { private final String path; FileUtils(String path) { this.path = path; } public void readFile() { File file = new File(path); Scanner scanner = new Scanner(file); ... } // other utility methods } Usage FileUtils f = new FileUtils("test.sql"); f.readFile();` Q: Benefits of rotating a token I have recently been exposed to a project where the token is supposed to be rotated after a few days. I personally found it a horrible practice, but I am not sure what the benefits of this would be. I can think of the following reasons, of which I would like to know which are the most important ones: Security: The token is stored in plain text and I would expect to see every human being using rotation as a security feature. Is this reasonable? Save space: The author mentioned that rotating the token not only saves space (which I can also understand), but the token also uses less space. Is this actually the case? Reduce the service interruptions: The token is rotated every day. As the token gets older, the service that uses it will, of
