To change a single layer to black-and-white, use the Black & White adjustment for the corresponding layer. To change a single layer to color, use the Colorize adjustment. To change an entire image to black-and-white, use the Dodge & Burn filter. To change an image to color, use the Colorize filter. Additionally, Photoshop has many built-in or plug-in programs that perform a variety of tasks, such as converting images to different file formats, manipulating digital photos, and converting scanned files to digital images. Examples of plug-ins include the Silver Efex Suite and Pixelmator Pro. (You can read more about the Silver Efex Suite and Pixelmator Pro in the Black & White Conversion video recipe in Chapter 16.)

Packing a set of helpful features, Photoshop Elements saves your time. Here are the best features to work on your images and save time. The invention relates to a device for making two-dimensional measurements of an undistorted image of a two-dimensional or three-dimensional object which is optically scanned by the beam of a scanning unit by means of a pair of light rays with one light ray being incident upon the object and the other light ray being incident upon a reference area, which is located in the immediate vicinity of the object and the object is located at a certain distance from a mirror axis of the device, the device comprising: a detecting unit for the measuring light ray which is reflected from the reference area. Devices of this kind are used in order to measure two-dimensional or three-dimensional data from an object. The object to be measured is placed at a certain distance from the scanning unit which is formed by a light source and a

mirror. The measuring light ray is directed onto the object to be measured, via a fiber optics. In the measuring light ray, the non-diffracted part of the light is successively split into a reference light ray and a measuring light ray. The reference light ray is projected into a reference area in the immediate vicinity of the object to be measured. After the object to be measured has been scanned by the scanning unit, the measuring light ray is reflected back into the scanning unit. After the measuring light ray has traversed the scanning unit a second time, it is directed into a detector for the reference light ray. In order to determine the distance of the measuring light ray and the reference light ray with respect to one another, a beam splitter may be used. After the time interval between the moment of reflection and the moment of reflection has been measured, the relative time positions of the measuring light ray and the reference light ray are registered by means of

the detection of the reference light ray. The time position of the measuring light ray is likewise registered. If one light ray is reflected into the detector and the other light ray is reflected into the reference area, the time position of the light ray incident upon the detector and the reference area may be measured. The measuring light ray and the reference light ray are supplied to the scanning unit via a fiber optics. If the angles between the light rays in the reference area and the light rays in the measuring area deviate from the reference angles, distortions arise in the scanning of the object. In the case of a fiber optics supply, the light rays to the reference area and the light rays to the measuring area deviate from one another because of the different angles of

Like it or not, there's a serious lack of Pokémon Go along the Oklahoma boardwalk. The AP reports on the phenomenon, writing: "The popularity of the game has led to a variety of copycats, including Herobust, Pokemon POP!, POKerdo, Pokemon Cruise, Pokemon Beach and Pokemon Beach 2, as well as businesses springing up to capitalize on the craze. "Some are new, some are older, but they share the same goal: to lure people back to the summertime fun at the beaches." The article's author, Chip Brown, posted these pictures of Pokemon-themed rides and carts on the boardwalk in downtown Oklahoma City: They're in the paper, right. Meanwhile, there are no Pokemon in the Oklahoma City area yet, as far as I can tell. We can only hope. Also, don't try to draw this one. That's all for today.
