-free screensaver, -screensaver, -avatar screensaver Author: Storyboard Media IncQ: How do you add a lot of money to a file and then transfer it to a remote server using XMRig? I'm having a really difficult time trying to figure out how to do this. I have a lot of money that has to go to Bitcoin. At the start of this year, I put a lot of money (just over 50 BTC) into my XMRig wallet. Now I want to add more money into my wallet before my wallet is emptied (as time goes by). I am doing the following. fileTransfer('xmr', my wallet file, fileTransfer(XMRig.address, my remote server address, '1000')

A: You can do something like this: Start transaction withSendAmount=10000 withReceiveAmount=10000 Then add to the transaction: withAddress=XMRig.address withBalance=withSendAmount To send the transaction, the following command will work: fileTransfer('xmr', my wallet file, fileTransfer(withAddress, my remote server address, '10000')) So, to make a transaction with 10000 XMR you first do 10000 withSendAmount to XMRig, then add 10000 withReceiveAmount to the transaction and finally add 10000 withAddress and 10000 withBalance to it.
