Get instant visual feedback about problems with your drawings. Just view the drawing from the 2D tab and get instant visual feedback on issues that arise during printing. Drawings in the cloud will use the most accurate and up-to-date version of the drawing. A new PDF viewer in AutoCAD Cloud enables you to view PDFs in AutoCAD. It can even offer you the ability to annotate your drawings and export them to PDF for reviewing in other applications. Improved drawing navigation: You can now quickly find your way around drawings by using a search box, shortcut windows, and features in the annotation bar. The new shortcuts in the annotation bar offer quick access to individual commands and search functions, such as Tag Search, Find Similar, Find All, and Find Next. You can now quickly navigate between workspaces in the viewport using a new navigation icon in the top-right corner of the window. Add a door handle to a circular cavity on a wall The level-of-detail (LOD) setting now also controls whether or not you see cavity surfaces as transparent. In earlier versions of AutoCAD, you had to set the LOD level to view cavity surfaces as transparent. Now, cavity surfaces are transparent by default. Improvements to default linetypes in the viewer: The default linetype for a viewport is now set by drawing type. Now, you can easily view your construction drawings by setting the viewport to View: Construction. The default linetype for AutoCAD Cloud documents is now set by drawing type. Now, you can easily view your drawings by selecting them in AutoCAD Cloud and pressing Enter. View and wireframe modes on the status bar now have the same default. AutoCAD now displays one mode per mode icon. Default linetype for rendering and animation now more clearly indicates the rendering and animation choices. Added a section on drawing type in the text settings. You can now display freeform shapes on your design surfaces, such as circles, polygons, ovals, and other freeform shapes. Support for printing freeform shapes on the design surfaces in drawing templates. You can now clearly mark and highlight parts of the drawing that contain the 2D components. You can now draw a 2D component on a wall and export it as
