Is there a workaround? A: I've just started converting my old code to Swift 3 & iOS 10. It was much smoother than I thought it would be. The only real problem I had was trying to get it to play nice with Storyboards. I'm still able to take advantage of the IAServiceRegistry, although the Product and Version numbers in the plist aren't any longer. My main issue was trying to take advantage of the IAServiceRegistry. I was trying to use it as follows: `func getPreferences(_ completion: (Bool) -> Void) { let prefs = IAServiceRegistry.default.loadServiceNamed("com.my.App.Preferences", withBundleID: "com.my.app") as! IAService let operation = prefs.load(withKey: "pref1", completion: { (preferences: NSUserDefaults, error) in if let error = error { completion(false)`
