We had problems finding anything that resembled a free alternative to several commercial players. devPLAYER does the job just fine, but it has some issues too. The only thing that irritates me is the inability to list the songs by artist, title, or any other type of information. However, I don't think that is a major issue. Pros: * Plays most file types * Mixing is easy to do (if you have a laptop or mobile computer, of course) * Slideshow feature * Retrieve information about a song (ie: disk, filename, year, etc) * Plays back ID3 tags * Plays xWMA files * Controls media volume (a bit shaky) * VDAF support * Ability to save playlists to iTunes or drag-and-drop into iTunes * Navigator is very easy to use,
