JennyStar is a simple and intuitive software application developed for letting you generate random numeric passwords. Unlike other similar programs, it offers a wide array of different options to configure such as: Main Window Choose a domain name Enter the user password Choose the login attempts Configure the length of the generated password Create a new password of random length and enter the validation key Create a new password of random length and enter the validation key Paste or the clipboard content to generate a random password Option: Generate multiple passwords at a time Generate a random password and paste it into the clipboard so you can use it as a reference on another computer 1.Numeric Password is a good software program which can be used to generate random numeric passwords. However, I have found some limitations in this program. For example, there is no option to create a specific password length. 2.This software also generates passwords through a pattern (aaaaaa...). Even if this is the best solution for generating random passwords, my concern is that this pattern is a bit difficult to memorize. 3.If you enter a wrong password, a new one is generated randomly. However, there is no possibility to check the password length and manually enter it instead. I didn't like the "re-randomize" option that is also offered. 4.Also, I could not copy the generated password to the clipboard. 5.The program also comes with no help key. Overall, this is not a bad program. It does a good job when generating a password. However, its limitations give it a 4 out of 10 rating.
