When the rice was cooked to make my sushi, I went to the gas stove to make my sauce. I thought this was somewhat disappointing that my thick and strong soy sauce couldn't fill the gap that I wanted. When I cooked my rice, the heat from the gas stove got to my taste buds and made it more spicy, flavor less and made the taste of my soy sauce bitter. Finally, I put all the sesaue on the rice, making the sushi taste really good. After eating the rice I started thinking if I was missing anything and that is where I came up with the idea of adding egg. An egg is really a good topping for sushi, but what about sushi egg? Well, I was skeptical at first but after I try my egg I quickly realized that this idea is really great. This not only adds a little crunch but also a little more taste to my sushi. Although this idea is great and I think it is the best I have had yet, the only problem is that it is expensive, way too expensive. I mean it has little value compared to the amount I am going to spend to get this nice idea. So the question is, have you ever had a great idea? Have you ever come up with a great idea but at a cost? Where do you go for your ideas? Most people don't really take time to think about the price and the quality of an idea and most of the time they end up buying the cheap and bad idea. Well, I hope this blog can give you some good tips on how to think about your ideas, the price and quality and most importantly what are the best ideas you can get. This is my first blog and I am very excited to start a great journey. Home & Garden The Parallax Propeller is the latest contribution to the Open Source Hardware movement. It's the culmination of many years of work by a large group of people, supported by Intel and the Open Source hardware community. We started working on this project in 2006 and it took many months of research, prototyping, and refining to get to where we are today. The movement is gaining momentum, with more and more projects coming to life, but we're also helping the community to understand the value of making hardware open, so everyone can make things they want without the costs and risks associated with proprietary hardware. I am a huge believer in the Open Source Hardware movement and I believe that this movement is going to change the 4bc0debe42
