The built-in Calculator on Windows is a perfectly useful, but it lacks a lot of features and functions compared to other existing solutions. Sine, Cosine, Tangent, Cotangent and Trigonometric modes are available. Modified Bessel Function of the First Kind and The modified Bessel Function of the second kind Bessel functions of first kind are the solutions of the Bessel's differential equation for the case of one singularity, i.e.,  $y''+ny'+(n^2-x^2)y=0$ . They are also sometimes called modified Bessel functions of the first kind, since their form is more like Bessel's hypergeometric function than the familiar form of the Bessel function. Bessel functions of the first kind can be defined as the solutions of the Bessel's differential equation For integer  $s$ , these functions are of the form where  $I(s)$  is the Bessel function of the first kind of order  $s$ , where by convention Bessel's function of order 0 is the Bessel's function itself. . Trigonometric mode: trigonometric functions  $\cos(x) = \sin(x) = [ - 1]$   $\sin(x) = \cos(x) = [ - 1]$  For non-integer  $s$ , the expressions are and Since the expressions are certainly the same with an opposite sign, it is impossible to choose one over the other without first choosing which is to be evaluated first. Pi mode: Pi Pi is a mathematical constant that is defined as the ratio of a circle's circumference to its diameter. It is approximately 3.14159265358979323846264338327950288391, but precision varies between calculators, such as the value given by the primitive Pi. . Roundoff mode: pi Pi mode is selected with 2 digits after the decimal point of the correct number Pi. As a calculator for scientific or engineering use, it has the right to omit the first digit of Pi, and truncate the second digit to two digits after the decimal point. This is because pi is typically used to approximate the ratio of a circle's circumference to its diameter, and one's desire for precision may not be as great as it is in typical scientific computing. . Euler's constant: e Euler's number is a mathematical constant 0968f5149f
