The User Account Control is a malware prevention tool first time introduced with Windows Vista. Despite its positive and protective role, UAC is very annoying at times, especially when you know your programs or processes are clean. One can completely deactivate the UAC or bring it down a couple of notches, without additional software, but if you want to keep the service up yet at the same time exclude specific applications from its coverage, UAC Trust Pal could be a better option. No installation needed A portable tool will always come in handy for users who intended to deploy it on more than one machine. Due to UAC Trust Pal size, a low-capacity flash drive is enough to carry it around in your pocket. Also, a classic installation will always leave data traces on your drive, while a portable app stores all its settings in the source directory. Add programs to the list and you're set The app comes with a compact UI that lets you add the programs you wish to automatically skip UAC checks. AS long as any application is present in the trust list, administrative rights will be assigned without question. Removing files from the list is also a walk in the park. Select the entries you want out and click the Remove button, nothing complicated. If you try to add an item to the list and an error regarding administrative right occur, it most likely means you have the UAC turned off. Make sure the User Account Control is up and running, or the application is rendered useless. Conclusion In short, UAC Trust Pal is an interesting solution to allow a specific application to bypass the User Account Control check. For a somewhat old application, it still has fast response times, and it's pretty stable. The only downside is the fact that it is no longer officially supported.]]> Users can turn off the User Account Control entirely, to use a couple of other useful techniques to appease its restrictive nature. Here are a couple of pieces of information you might need to know to try an further tweak the UAC. Deactivating the User Account Control In the 09e8f5149f

UAC Trust Pal

User Account Control is a security feature built into Windows Vista that prevents Windows applications from running as a normal user. This feature is turned on automatically and can be turned off via the System Settings > User Accounts. However, this feature is plagued by several problems, and some users are just not comfortable with the security "overkill." This problem is where UAC Trust Pal comes in. In this article, I will show you how to use UAC Trust Pal to "nuke" the UAC prompt every time a program is loaded. First, make sure you have a working internet connection so that you can download the executable file. When I say "UAC is turned off," I mean that the UAC prompt is not showing. Launch UAC Trust Pal (after the application is downloaded) and click on the button on the top left. Select Exceptions (note: if you are using an earlier version of Windows, the check box for the Sticky UAC prompt option is disabled, but that's because it is not implemented.) Click the Add button in the top left corner. Select the program you want to exclude from UAC (the one that you want to run as a normal user) and click the Add button in the top left corner. You can leave everything as is and press Apply, or you can modify the program's current configuration. If you choose to modify the current configuration, you can add the program to the exception list, remove it from the list, or change the setting to "Ask before running." You can also edit the permissions. When you are done, click Apply and close the window. To confirm that the UAC prompt has been removed, launch the program you would like to launch as a regular user from the Start Menu and click the Start button. When you click the Start button and then the Run option, UAC will show and the program will launch with the UAC prompt.
