You can use it, but you have to pay a license fee to receive the latest version. We recommend you to buy it from a Shareware Company. You'll find their list at Informations about Shareware: Shareware products are designed to be used on a trial basis, often without a charge. Although some of them are free to use, you are requested to pay if you want to receive a new version. You have the choice between monthly, yearly, or perpetual subscription fees. Sometimes,

What's New In ExcelExtension?

-------------------- ExcelExtension is a collection of tools designed to enhance the Excel capabilities by using Visual Basic. The add-in allows you to use macros in order to perform certain actions that are not available or hard to access. You can highlight text, merge cells, change letter case and quickly change the table alignment by using the buttons from the Excel ribbon. Changelog:

------------------- v1.0 (May, 2009) - Initial release Installation: ------------------- Excelexcel.exe /Add-Ins /Extension /Misc_xclExcelExtension.cab How to Use: ------------------- Copy the sheets in the VBA project from the archive in the Excel start-up folders. In the ribbon select the button "Code Editor". You will see the VBAProjectEditor. Right-click the files in the project, and select Import Sheet(s) and Select file(s) on your computer to import the sheets into the VBA project. Get the latest version: ------------------- Check the SourceForge site Supported Versions: ------------------- Excel 97 to Excel 2007 License: ------------------- This product is subject to the Microsoft Developer Agreement (MSDA), see www.microsoft.com/opensource/ms-da/ Contact: ------------------- Please contact the author at Q: Search for position of value in matrix I need to get a position of row and column in a matrix if value is in the matrix. A = magic(3) print(A) [1 2 3 4 5 6 7 8 9] value = 4 print(A[A==value]) ValueError: need more than 1 value to unpack print(A[value]) ValueError: not enough values to unpack (expected 2, got 1) print(A[matrix[0,0]]) ValueError: array index out of bounds print(matrix[A == value]) [1 0 0 0 0 0 1 0 0 0 0 0 1 0 0 0 0 1 0]

print(matrix[value]) [0 0 0 0 0 0 0 1 0 0 0 0 0 0 0 0 0 0
1] print(matrix[value,0]) Value

System Requirements For ExcelExtension:

Minimum: OS: Windows 7 SP1 64bit or higher Processor: Intel Core i3, AMD Phenom II X4, Intel Core i5 Memory: 4 GB RAM Graphics: NVIDIA or AMD ATI HD 57xx or newer, NVIDIA GeForce GTx or AMD Radeon HD 6000 or newer DirectX: Version 11 Storage: 10 GB available space Additional Notes: The Oculus Rift HMD requires a powerful graphics card. We highly recommend the NVIDIA GeForce GTX series for the best VR experience.
