The postaxial polydactyly of Nettles (*Trimeresurus flavoviridis*, Colubridae): A morphologic study of dorsal scale pattern and structures of the hand. The aims of this study were to investigate the dorsal scale pattern and to observe morphological characteristics of the postaxial fingers and hand of adult *Trimeresurus flavoviridis*, a species with postaxial polydactyly. One hundred twenty specimens of adult *T. flavoviridis* were collected and examined. The specimens were divided into 3 groups: 60% of the specimens had postaxial polydactyly, 32.5% had mesopterygium, and 7.5% had mesopterygium and postaxial polydactyly. The minimum number of postaxial fingers in the investigated specimens was 5. The most common number of postaxial fingers was 6. The morphological characteristics of the hand in *T. flavoviridis* were similar to those in other species of the same genus and other closely related genera. However, there was no correlation between the number of postaxial fingers and the number of motor endings in the postaxial fingers in *T. flavoviridis*. Scale characters, scale texture, and the morphology of scales in the postaxial fingers of *T. flavoviridis* are characteristic and diagnostic.If you want "glowing" text on your old or boring desktops, it can make you look classy. And to be honest, whether you're using Windows or Macs, it makes you look smarter. Here's the best tips to make Windows or Mac desktop glow. KLNCIT/ECE/405. Theory of Robotics. (Lakshmi Ganesh) . Research in Education - Journal of CASBRAE. Springer, New York. K.P.Sagar. Ganesh S. . Revisiting the synthesis of end-functionalized poly(aryl ether)s with attention to the regioselectivity of aryl or vinyl ethers. Six examples of the regioselective synthesis of poly(aryl ether)s, including alkyl, aryl, and vinyl ether linkages, were carried out in the presence of palladium (0) catalyst and a 2:1 catalytic mixture of [NHC(2,6-Cl(2)C(6)H(3))(2)]PF(6) and CuX (X=Cl, Br, or I; 1-3 or 5-7) under strictly anhydrous conditions. This method leads to the formation of block copolymers, stereoregular poly(aryl ether)s, and poly(aryl ether)s with well-defined stoichiometry for five examples. Interestingly, the diblock copolymers obtained from aryl ether monomers with aryl and vinyl ether linkages, in which a number of aryl and vinyl ether units coexist, were isolated in high yields. Because the present protocol permitted the introduction of multiple units of both isomers of aryl and vinyl ethers, the presence of these two types of units in the polymer was clearly confirmed.Introduction to cold atom interferometry and the current status of cold atom clocks. We review the current status of cold atom clocks and interferometry experiments, the current status and the potential future of atomic fountain and gyroscope experiments, and the status of cold atom guiding experiments. We also discuss some of the various types of systematic uncertainty. We conclude by presenting a number of new experiments for which the relevant current experimental results are summarized. These include cold atom gyroscopes, atom-surface interactions, cold atom-accelerometer experiments, and cold atom dual-species symplectometry. We also provide a brief review of related topics such as cold atom molecules, atom chips, and ion clocks. Finally, we also discuss some of the similarities and differences between cold atoms and quantum dots.Trump's policy of separating migrant children from their parents at the border is outrageously immoral, but what exactly
