In This Chapter Choosing what to shoot Capturing the perfect shot Identifying the challenges of photography Mastering the craft of taking great photographs Getting to know your camera A photograph is not a perfect document of reality, but rather an interpretation. An artist interprets reality. A photographer interprets a reality. Photography is more than just a passive record of reality, it's an interpretation of reality with the ability to communicate through the written word, on film, or on the screen. Every photo is a technical challenge. In this chapter, I explore the various challenges of photography. You can face many challenges without intending to; indeed, once you see the picture, you'll be thrilled with it, but when you start to record it in the camera, it will no longer be as good. However, if you look carefully and try to understand what is happening in the picture, you'll see how the challenges make the image stronger and more creative. The creative process is an artistic and technical process. A photograph is best when it has each of those features blended together into a seamless whole. Every photographer goes through these challenges, and all photographers get better and better as they progress in their art. In this chapter, I explain the creative process and discuss some of the challenges you'll face with your first image. ## Selecting What to Shoot Think of the previous pages in this book as a thought process for selecting your photographic subjects. This is not a book about your photographic technique, or even a "how to" manual for learning to take better pictures. It's a discussion on why to take pictures, and why your pictures will get better with practice. In this section, I discuss the many different aspects that influence the creative process of photography. These are all important aspects that you should keep in mind as you look for the best subject for your photograph.

They've been behind such hits as Who Framed Roger Rabbit and The Goonies, and this month they head to the Czech Republic for a big budget action flick about the Pirate Bay called Swarm. Now, thanks to the folks over at Eurosport, we have a short interview from director Oscar Velasco and producer Erwin Dickhoff, and a behind the scenes clip from the set. It's going to be fun to watch the movie on the big screen, because the story is so cool, but it'll be even more fun to see the reactions when they start playing the movie in stores. The fast and furious new world of online video brought us the MP3, the iPod and after that, the live streaming. But the next big thing is on the way: the networked computer that you carry in your pocket. And while that sounds a lot like a horrible case of DRM-fever, I do see the promise. The Internet has always been a hive of computing power, but it wasn't until recently that the sites we use every day started to become connected to others. Now, with the advent of cheap bandwidth and high-speed cell phone coverage, we're on the verge of a truly networked society that everyone can use. Three years ago, when Netflix launched their streaming video service, they got a lot of attention because the quality wasn't there. They knew that the experience would improve over time, and that the quality would improve, but the public wasn't exactly on the Netflix bandwagon. But that all changed when they released movies that are so good, it's like you're watching it in the theater. While watching a movie on the Internet is a great way to relive some childhood classics, if you have Netflix, you can also relive many classic films that have been waiting for a good high def release. You've probably noticed that when you sign into your Netflix account, there's a message that says "You haven't been watching enough TV lately." What they mean is you're not watching enough of their streaming movies, and that you should go watch a movie
