The same as above but more up to date. As well as introducing a new version of the C-Code, the 'printpath' is modified and is now the same as in the other version. It is designed to incorporate the reader so that the operator can choose to read it as well, the printout does not split the whole alphabet into blocks as Morsemaker1 does. as a result of the search, and inasmuch as the respondent raised no objection to the search at the time it occurred, the search did not violate the respondent's Fourth Amendment rights and any objection to it was waived. B. The judgment of the superior court is affirmed. NOTES [1] 384 U.S. 436, 86 S.Ct. 1602, 16 L.Ed.2d 694 (1966). Leon*, \_\_\_ U.S. \_\_\_, 104 S.Ct. 3405, 82 L.Ed.2d 677 (1984) as well as in *Illinois v. Krull*, \_\_\_ U.S. \_\_\_, 107 S.Ct. 1160, 94 L.Ed.2d 364 (1987). [3] The threshold test of the specific grounds supporting the arrest warrant is not applicable to a search warrant. In *State v. Potter*, 526 P.2d 831, 833 (Alaska 1974) (officer who saw marijuana in plain view during a lawful search based on a search warrant could arrest without the necessity of establishing the truth of the facts supporting the arrest warrant), the United States Supreme Court held that: An arrest warrant founded on probable cause implicitly carries with it the limited authority to enter a dwelling in which the suspect lives when there is reason to believe the suspect is within. See *United States v. Riddick*, supra, 684 F.2d [544] at 549 [(9th Cir.1980)]. Since the police were justified in entering the residence to execute the arrest warrant, it would have been unreasonable to deny them the right to search the petitioner's room for weapons in order to ensure their safety while they searched for him. The Morsecode App for Android does not incorporate the Morse Reader in the standard Android OS, and uses the Android 'read/speak' library to effect the reading of Morsecode from the keyboard and then speaks it out. The MorseCode App integrates with the 'read/speak' library (used for reading input from the keyboard) and supports the ability to talk the Morse Coded messages to the Android OS. Android Apps Author: Note: To use MorseMaker2 follow the instructions above. To use MorseMaker, click on MorseMaker2 download link. MorseMaker Reviews: MorseMaker Review: Morsemaker has been developed to be a 'stand alone' Morsecode app. It requires no installation, setup or run-time files and hence is free from the complications experienced when using the normal Morsecode reader. It has been designed with the users needs at the forefront, to make sending and receiving Morse code messages to or from a receiving device as effortless as possible, It provides for the device's keyboard as the principal means of inputting Morse code, with 'Read/Speak' library to enable the Android os to display

the input. In turn, the 'Read/Speak' library then enables the device to speak the encoded messages out. MorseMaker2 has been re-written using a different programming language so that it can be compiled and run directly using the Android SDK, eliminating the need for a separate program to be installed on a mobile. Brief History: Morsemaker was originally written in Visual Basic for the PC in 1996 and was the first 'stand alone' Morse code app with the ability to speak encoded messages. It allowed both encoding and decoding to be entered from the keyboard, with the user having the option of entering single, double or no signal, depending on what needed to be entered into the Morse code key board. Morsemaker 2 was originally written in C# using the .NET Framework, initially developed to support the PC-only Morse code program, 'Morse Maker 2'. I've developed the app to be 'stand alone' and entirely self-contained with no installation or any further help files required to run it. To get started, all you need to do is download and install the app on your mobile. Morsemaker is a PC application that was originally developed for the PC-only Morse code program, 'Morse Maker'. ## Morsemaker2 With License Code

An accurate way to learn Morse Code using a computer. The program does not attempt to 'learn' the alphabet, it is simply a machine capable of producing all the standard Morse Code letters. Morse Maker will even strip out the unwanted dot/dot-dashes and stop signs. The program includes an auto-converter which converts Standard Morse into the most commonly used dot-and-dash format (used for radio communications). Morse Maker can then be used to send and receive. Note: It is possible to make your own software that produces Morse using the same format as Morse Maker (dot-and-dash using '45' as code for 'dot'). The supplied format works very well and produces a 'clean' code. However, the program is already available.

Trouble Shooting: If you have followed the instructions and the program is not working, please contact us. If the program was working but you found some letters or symbols flashing by quickly then you may have accidentally tapped a key. If you make the mistake of not tapping any key, the 'character' from this key will flash by and change what is being input. However, if you tap a wrong key and keep tapping it, more and more 'wrong' combinations will appear and you will want to close the program. There are a few minutes at the start where there will be one 'wrong character'. Just keep tapping the 'wrong' character and you will see more and more bad characters. Once you have removed this 'wrong' key from the keypad (removing the touch sensor or removing it from the program), all will be well. If you made a mistake and 'tapped' a number it may also happen. You may need to re-program the device and try again. However, if you have touched any key in the area used for letter numbers it is impossible to re-program the device. The device will not be damaged, just locked. The 'number' key can be removed and it will still work. Obviously any number will show the expected dot/dot-dash and any dot will show the 'stop' symbol. Morse Maker Basic Format: Version 8.0 Working Range:  $-35/+180^\circ$ ,  $[-180^\circ/+35^\circ]$  for both CW and SSB. Program Time: 30+ Minutes Characters: 91, 42, and 2 for standard Morse 81 for 'dot-dash'

## What's New In?

Morsemaker2 is a modern update to Morsemaker. The purpose is not to be a run-time extension, or a separate program for learning Morse Code, but a single, single source Morsecode application with a complex, but consistent and working set of tools at your disposal. It is written in Java and is fully modifiable. It is highly configurable, with a very powerful and useful text editor. It includes many other tools such as a list of all characters, a phonetic reading, an audio editor, a Morse Editor, an Auto Reverse/Auto Stop list and a mirroring application. The Morse code it implements has been preserved and programmed to provide a rich selection of the traditional English style, but with a lot of modern features to make it easy to apply. Each character is stored as an image (jpeg). These have been put together and converted to a standard format to make them all easily selectable by the user. As each

---

element is brought together, the user can 'see' the 'explosive' nature of Morse through the 'patterns' which emerge. For example, a sequence such as 'dasdasdz' looks like 'zzzzZZzzZDDDDDDZZ' which is very similar to the way a real operator would use it. This allows the user to become familiar with the character set. Once a character is selected, it can be easily modified by the user using the input mode menu items. The number of options available to the user are considerable; everything from character length, character formation, duration, steady or inverted speed to many others. As the entire application is fully configurable, it is also easy to change from a traditional style to one with many additional features, as the original characters are retained and all patterns and settings are easily retained by saving them to text files.
