PASTA is a very fast dynamic programming language. You can design and compile programs using a fast compiler. You can edit programs in an interactive environment using a high-performance text editor. PASTA programs are compiled and executed very fast. You can create, edit and compile PASTA programs in a browser. PASTA tools include a fast compiler, an interactive interpreter, a text editor, a program editor, a help system and a development library. PASTA is an innovative programming language that offers many new concepts and also offers many features that are extremely important for programmers such as a powerful and easy-to-learn type system. You can use PASTA in the context of any programming environment, such as C, Java, Scheme, Windows, Unix, Linux, Mac OS X,

etc. PASTA Development Environment includes a PASTA compiler, an interactive interpreter and a PASTA interpreter. PASTA includes a powerful debugger (under development) that lets you see the intermediate results of a program at each step. It also lets you change and debug any part of the program step-by-step. This Debugger is very similar to another debugger, called DDD, which has a great speed but doesn't have the user interface of PASTA. PASTA Development Environment includes a PASTA compiler, an interactive interpreter and a PASTA interpreter. PASTA Development Environment includes a PASTA debugger that lets you see the intermediate results of a program at each step. It also lets you change and debug any part of the program step-by-step.
