What Photoshop is and what it isn't Have you ever had to use Photoshop to edit an image in such a way that it looks like it was shot on a cruise ship? Or to create an image that will look like a distant tree or distant cityscape through a fish-eye lens? Or to create an entirely different image that has the appearance of someone's fractured finger? No, Photoshop can't do any of those things. It's a raster image editor: In addition to altering the pixel-level image data, it manipulates objects such as a layer or a 3D object on top of the image or changes the color of everything within the file. Photoshop's capabilities are limited by the type of raster images it manipulates. When you Photoshop a JPEG, you're altering the pixel-level data of the image. When you Photoshop a JPEG, you're altering the pixel-level data of the image. You're not altering the appearance of the entire file; you're altering the data in the

You can change the color of the image, but you're not manipulating the data in any other way. Unfortunately, it does have one limitation that can be a blessing if you're aware of it and use it properly. For some image formats (JPEG being one of them), the pixel data is stored in file as a raster image, which means it's stored as a bitmap image. This has the advantage of containing all the image data for each pixel in the same file, so it doesn't have the same overhead as a vector image.

When you use a word like photoshop, you're trying to give someone the impression that you know a lot about the subject. When someone uses the word, they're putting your brand on their product, and they want to make sure that they give off the right impressions. You're saying that you work for a company like Adobe that's been doing image editing for more than 25 years, so you're trying to give that impression. How many people know about Photoshop's limitations? Only about 1% of the population uses Photoshop. I know that for a fact because I try to
