Blue light is the most important color in determining proper white balance. The display itself may also influence the white balance of the camera, so it is best to perform the test for white balance with the display turned off. Normal, indoor lighting can have a flicker effect of up to ± 30 Hz (90 cycles per second), which can introduce color shifts and can result in incorrect readings. Due to the P40 Pro's low camera flicker, there is no flicker on the screen. Variable Valve Timing Control (VTC) is a system that can vary the timing of both the intake and exhaust camshafts independently. Because of this, cam timing can be optimized to suit the driving conditions. The system works best under light loads, when valve overlap is increased to reduce pumping losses and improve fuel efficiency. This effect is most pronounced during initial acceleration, as increased valve overlap allows the intake and exhaust valves to open a full 180 degrees. This makes the engine a better vacuum pump, increasing scavenging efficiency and torque. The enhanced scavenging effect when the engine is at light load and low speed helps reduce noise by providing a more effective sound barrier. White Noise FVTC is free of dipstick, and no need to bypass the ancillary filter. It can be controlled from the touchscreen or via the Command Panel, but the results and improvements are independent of the method used to control the system. The 1.5-liter turbo engine continues to feature Variable Timing Control (VTC) that can vary the timing of both the intake and exhaust camshafts independently. With this system, cam timing can be optimized to suit the driving conditions. Under light loads, valve overlap can be increased to reduce pumping losses and improve fuel efficiency. When engine speed is low and engine load is large, such as during initial acceleration, the amount of overlap is increased to boost the scavenging effect, which improves torque and responsiveness. When engine speed is high and engine load also is high, such as during full-throttle acceleration, the amount of valve overlap is reduced to increase engine output by improving both intake and scavenging. 5ec8ef588b
