Dinnerware sets come in a variety of materials, and two of the most common are porcelain and china. Both materials are made from clay and fired at high temperatures, but there are several distinct differences between them. This guide will help you decide when to choose porcelain over china. Porcelain vs China Porcelain is a type of ceramic material made from clay that is fired at a higher temperature than regular china. As a result, porcelain is harder, denser and more durable than china. It is also more expensive, and usually has a smooth and glossy finish. China is a type of ceramic material made from clay that is fired at a lower temperature than porcelain. It is less durable and less expensive than porcelain. China usually has a matte finish and is more likely to chip or break than porcelain. Durability Porcelain is more durable than china, as it is fired at a higher temperature and is more resistant to chips and cracking. This makes it a great choice for everyday use. China is not as durable as porcelain and is more likely to chip or break if dropped or handled too roughly. This means it's best suited for occasional use or for display purposes. Cost Porcelain is generally more expensive than china, as it is fired at a higher temperature and is more durable. It is also more likely to retain its shine and colour over time. China is usually less expensive than porcelain, as it is fired at a lower temperature and is not as durable. It is also more likely to fade or discolour over time. Aesthetics Porcelain usually has a smooth and glossy finish, which gives it a more sophisticated and elegant look. It is also less likely to fade or discolour over time. China usually has a matte finish, which can give it a more rustic or vintage look. It is more likely to fade or discolour over time. China usually has a matte finish, which can give it a more rustic or vintage look. It is more likely to fade or discolour over time. Conclusion When it comes to choosing between porcelain and china, it ultimately comes down to your
